| <p>What</p> <p>What are the modules are required for activate EMI card?</p> <p>Admin</p> <p>What are the functionalities ?</p> <p>Validate card details Activate Update</p> | <p>HOW</p> <p>Validate Card details:</p> <ol style="list-style-type: none"> 1.By submitted Documents(card no,expiry date,name,cvv)and if validate generate otp 2.By reaching the customer to validate . <p>Activate :</p> <ol style="list-style-type: none"> 1.by clicking the activate button 2.either by calling <p>Update User status:</p> <ol style="list-style-type: none"> 1.By SMS 2.By email |
| <p>Why</p> <p>Validate Card details:By submitted documents .Because we can have all the details and which makes easy validation.</p> <p>Activate by clicking the button which will be less time and more convenient .</p> <p>Update the user by SMS which will be more easy for everyone to receive .</p> | <p>Why not</p> <p>Validate Card details:By reaching the customer is also a good one but sometimes if we miss anything it will make them to act arrogant .sometimes it will be a critical decisions.</p> <p>Activate by calling is not that much effective compare to button which may consume more time.</p> <p>Update User by email is not applicable because it need internet as well as it need mail id .so we cannot ensure that everyone have that .That's why it is impossible.</p> |
