

## W3H Analysis – View registered user by the admin

What	How
<p>1. What does the admin want to do? Answer: he admin wants to view the list of all registered users in the system.</p> <p>2. What information will the admin see? Answer: User name, email, role, status, registration date, last login, and actions.</p> <p>3. What operations can be done on the user list? Answer: Search, filter, sort, view details, export, activate, suspend, or delete a user.</p> <p>4. What triggers this feature? Answer: When an admin logs in to the Admin Dashboard and selects “User Management”.</p>	<p>1. How will the admin access the user list? Answer:</p> <ul style="list-style-type: none"><li>• Method 1 : Admin Dashboard → User Management → Registered Users Page.</li><li>• Method 2 : Login into the system using user name &amp; password.</li></ul> <p>Q2. How is the list displayed to the admin?</p> <p>Answer:</p> <ul style="list-style-type: none"><li>• Method 1 : In a table with pagination, search bar, filters, and action buttons.</li><li>• Method 2 : In the dashboard by using the view option</li></ul> <p>3. How does the system fetch the data? Answer:</p> <ul style="list-style-type: none"><li>• Method 1 : Through a backend API.</li><li>• Method 2 : Fetch data through the Database.</li></ul> <p>Q4. How can the admin manage a single user?</p> <p>Answer:</p> <ul style="list-style-type: none"><li>• Method 1 : By clicking on the user row to open the user detail panel and perform actions.</li><li>• Method 2 : Automate the system to handle the user based on priority.</li></ul>
Why	Why Not

<p>1. Why does the admin need to view all users?</p> <p>Answer : To monitor user registrations and track their status.</p> <p>2. Why is this feature important for security?</p> <p>Answer : It helps identify suspicious or unauthorized accounts.</p> <p>3. Why show user status?</p> <p>Answer : So the admin can take action (Activate/Suspend/Delete) if required.</p> <p>4. Why include search and filters?</p> <p>Answer : To help admin find specific users quickly in large datasets.</p>	<p>1. Why not allow normal users to view the user list?</p> <p>Answer: Because it exposes private information and violates privacy rules.</p> <p>2. Why not show unnecessary sensitive data to the admin?</p> <p>Answer : To comply with privacy laws (GDPR/IT Act) and avoid data misuse.</p> <p>3. Why not load all users at once without pagination?</p> <p>Answer : It slows down the system and increases server load.</p> <p>4. Why not allow every admin to edit or delete user accounts?</p> <p>Answer : Only authorized admins should modify data to prevent accidental damage.</p>
