

WHAT ?	HOW ?
<p>What are the functionalities for update user account status?</p> <p>Change customer account status</p> <p>What are the functionalities for transaction monitoring ?</p> <p>Track all financial transactions for accuracy and fraud detection.</p> <p>What are the functionalities for budget and invoice ?</p> <p>Manage budgets and generate invoices for purchases and services.</p> <p>What are the functionalities for payment and receipt management ?</p> <p>Handle payments made by customers and receipts for completed transactions.</p> <p>What are the functionalities for reports and dashboards ?</p> <p>Provide visual and detailed reports of financial activities.</p>	<p>Change account status:</p> <ol style="list-style-type: none"> <li>1.By giving Email message to change</li> <li>2.By making the changes in API</li> </ol> <p>Track all financial :</p> <ol style="list-style-type: none"> <li>1.By having the card details we can track</li> <li>2.By calling and tracking</li> </ol> <p>Manage budgets:</p> <ol style="list-style-type: none"> <li>1.Control by having the limit</li> <li>2.by giving random budget amount</li> </ol> <p>Handle Payments:</p> <ol style="list-style-type: none"> <li>1.make a confirmation when the amount is received to the person</li> <li>2.handle by card holder</li> </ol> <p>Visual and detailed reports</p> <ol style="list-style-type: none"> <li>1.In dashboard we can have separate for reports and download them</li> <li>2.We can mail them all the reports to all the payment activities</li> </ol>
WHY ?	WHY NOT ?
<p>Change account status by making change in API so that user can view as well as we can also see it</p> <p>Track finance by having the card details so whenever we want to check and want to make report it will be useful.</p> <p>Manage budgets by controlling the limit how much amount to use .</p>	<p>Change account status by giving a notification in mail id is more time consuming</p> <p>Track finance by calling and tracking is not a real time practice</p> <p>Manage budgets by giving random budgets will be a loss of amount</p> <p>Handle payment by calling the card holder is a vague way and also we miss some payments</p>

<p>Handle payments by making a conformation when the amount is received</p> <p>Visual and detailed reports by have them in a separate UI in dashboard and they can download whenever wanted</p>	<p>Visual and detailed reports by mailing all reports .then they wont have if it is old in mail and every time need to come to mail.</p>
